

ZPE BASICS

ZPE basics for you. What is it? Part One

For those who realize that an ungodly world has taken hold of civilization and that nothing short of divine intervention can stop the madness of a system gone out of control and destined to self implode, this introduction to ZPE may be of some interest.

But what is ZPE? ZPE stands for “zero point energy”. But what is that? Zero point energy is the homogeneous isotropic ubiquitous quantum electrodynamic energy field that permeates the entire universe. Does that help? Probably not, unless you’ve got a PhD in quantum physics plus willing to think outside the box of some accepted scientific concepts concerning the environment around us. But don’t stop reading just yet because this article will demystify the higher math world of quantum ZPE and make it possible to “get a handle” on what ZPE is and exactly how, *in layman’s terms*, it can be understood in order to help survive the catastrophe of a breakdown of civilization, as we wait for God’s hand to mercifully guide us to rebuild the world anew (and permanently). So we’re going to translate some quantum physics concepts into the everyday language of “Joe six-pack” in order to help inquisitive individuals tap into a free source of energy that is right under our feet even as you read this article.

First of all, I’m not a trained physicist, scientist, or electrician, and do not pretend to be. But I am a habitual tinkerer and I’ve gotten pretty good at tinkering around in several areas of interest to me down through the years. So as far as ZPE goes I am self taught and learning daily. Anyone who wants to learn the nuances of ZPE can do so, at least to a nominal level of being able to tap into some free energy to power up some survival equipment when the time comes. But it will take dedication, common sense, and patience in learning something totally new to one’s understanding just like learning the alphabet and elementary writing of sentences in grade school. Can free energy ZPE device construction be learned from Internet videos? Highly unlikely. For the greater

part those numerous vids that show “a proven method” of tapping into free energy are usually bogus. The reader is welcomed to attempt to construct any number of “for certain” free energy machines or projects from Internet vids but will soon find out it has been an exercise in futility. A lot of scammers just like to pull video pranks on viewers, or achieve some low brow level of “fame” and will post anything Online to do so. On the other hand, there have been several legitimate independent researchers who have spent their lives inventing free energy devices that actually have tapped into the universal power of ZPE. These are the men whom we want to study and formulate practical ideas from, based upon their tried and true results in ZPE. The most famous inventor in this realm of discovery and inventions was Nikola Tesla who gave us the AC electrical current application that runs our appliances today. Tesla called ZPE “radiant energy”. So why is this universal radiant energy now known as zero point energy? Let’s explain.

Although investigative scientists, theoreticians, mathematicians, and religious philosophers have believed in the existence of a universal force for centuries, it wasn’t until recently that such a force was actually discovered. In 1948 and 1958 the experiments of physicists Hendrick Casimir and M.J. Sparnaay revealed the effects of an electromagnetic energy force upon two uncharged metal plates. The plates were positioned close to each other in proximity in a total vacuum cooled to the temperature of absolute zero (-273 degrees C). In a complete vacuum where nothing exists and at a “zero heat” environment there should have been nothing to influence any type of distortion to the plates --- but there was. The plates were measured to bend toward each other by an electromagnetic energy force that still exists within a place and at a point where “nothing” is supposed to be, that is, in a total vacuum totally absent of heat energy. Thus we have the term “Zero Point Energy”.

The ZPE is not only measurable on Earth, it is coming to the Earth from what we call “space”. The conditions of the Casimir vacuum are the same conditions found in space between planets, stars, and between galaxies. Nikola Tesla stated in one of his patents to collect radiant (ZPE) energy: “The sun, as well as other sources of radiant energy , throws off minute particles of positively electrified matter, which striking plate P, create an electrical charge on it.” (Apparatus for the Utilization of Radiant Energy, Tesla Patent US 685,957, 5th November 1901). Knowing that this energy can be collected and distributed world wide Tesla also wrote, "That electrical energy can be economically transmitted without wires to any terrestrial distance, I have unmistakably established in numerous observations, experiments and measurements, qualitative and quantitative. These have demonstrated that it is practicable to distribute power from a central plant in unlimited amounts, with a loss not exceeding a small fraction of one per cent in the transmission, even to the greatest distance, twelve thousand miles to the opposite end of the globe." (Nikola Tesla, "The Transmission of Electrical Energy Without Wires as a Means for Furthering Peace," Electrical World and Engineer. Jan. 7,1905, p. 21) 2

A genius inventor far ahead of his time and who expanded upon Tesla's discovery of methods to harness radiant energy was Dr. T. Henry Moray of Utah, USA. Moray wrote the much renowned book known to present ZPE investigators: The Sea of Energy in Which the Earth Floats, 1945 (first published in 1930 as Beyond the Light Rays). Dr. Moray describes the unlimited universal energy field as a "sea" since it has fluidity properties somewhat likened to a huge ocean of magnetic energy with waves. For those who know that all of creation is the work of an infinitely intelligent being, whom we call the Creator or God, the Scriptural relevance becomes accurate although missed by most theologians. Psalm 148:3,4 states that there are "ye waters" above the heavens (heavens being the visible sky, our solar system, and the celestial galactic spheres out as far as we can see and detect). It is perfectly understandable that some think that this means that everything "out there" is actually H₂O water (and not space) in which the Earth is submerged, and assume that this is why the sky looks blue. But this is a simplistic error. The Hebrew word for "water" in Psalm 148:4 is "mayim" and is more properly *a flow of any liquid type substance* which can include water, beer, urine, a milk shake, or any substance of a flowing liquidity --- including our newly realized quite fluid-like ZPE energy field with its magnetic *waves*. [Gesenius' dictionary traces the word mayim to include "flow" better than does Strong's] In other words, God has formed an infinite "ocean" of non-visible ZPE from which He has then formed the entire visible universe. (Rom.1:20) Matter is the result of a ZPE fluctuation within various points of God's infinite building block "ocean" of magnetic potential energy. ZPE magnetic fluctuation will be discussed in more detail in Part Two of this article.

Thus the Bible is accurately correct in that there is a great "fluidity" above the heavens, however it is not H₂O but the ocean of ZPE. We see the ZPE ocean as dark vast empty vacuum space, but it is far from empty as proven by the Casimir experiment, and on the contrary is one huge energy field with magnetic photons popping in and out of existence continually and in all directions at once.

How much free energy is coming to Earth from the vacuum of space? Seemingly an infinite amount just waiting to be utilized. Not only is ZPE arriving to Earth from far outside but the Earth's rotational spin and speed through space enormously enhances the collection of ZPE that saturates the entire universe much like a spinning rotor works in a generator to produce electricity. One of the most prolific inventors that has also advanced Tesla's concepts is Don Smith. Don built nearly 50 devices for free energy collection and wrote in much detail concerning the subject. From one of his documents "Resonate Electrical Power System" Don writes: "Potential Energy is everywhere at all times, becoming useful when converted into a more practical form. There is no energy shortage, only grey matter. This energy potential is observed indirectly through the manifestation of electromagnetic phenomenon, when intercepted and converted, becomes useful. Therefore, the Earth's Mass and Speed through space gives it an

enormous electrical potential.” The reader can sort through a lot of Don’s material still available on the web by searching “Donald Lee Smith Free Energy”. Some of Don’s inventions are complex and reaching many thousands kilovolts in power. They are dangerous to work with. But the ZPE novice or hopeful survivalist who wants to turn on a low wattage LED light bulb or power a ham radio for 15 minutes need not worry about duplicating Don Smith’s projects. There are a few relatively easy ways to tap into free ZPE for a few basic home needs. Such devices can produce about 50 volts or less so that a beginner (probably) won’t get killed if he makes a mistake or gets careless with circuits. It’s within this novice range that our website articles will be focused. Projects, diagrams, schematics, and tips are not yet uploaded to this site, but hopefully by the summer of 2023 a few will be – with more added as time permits.

God bless and peace be with you. --- KL
